 **TAGSYS RFID™**
e-connecting goods

simplifying **RFID** for **Healthcare**

TAGSYS provides complete, reliable, high performance RFID infrastructure systems to efficiently identify, trace and manage items in a variety of healthcare applications including specimens, pharmaceuticals, assets & supplies, and health records.

Our unique RFID expertise, combined with a true understanding of business processes, makes us the ideal RFID partner to ease and ensure the success of your project and enhance your customer satisfaction.

TAGSYS provides a complete RFID system tailored to your needs and optimized for your application.

TAGSYS is a pioneer in enabling the adoption of RFID in the Pharmaceutical and Healthcare industries. Our approach is to innovate beyond the current state of the art in RFID to provide the reliability, interoperability and manageability that will leverage the characteristics of RFID to their full advantage according to the needs of our customers. Our RFID infrastructure is used in many health-sensitive applications where patient security is at stake.

Streamlined Operational Efficiency Leading to Enhanced Patient Care

Our expertise in RFID research and development, our experience in implementing RFID tracking systems at industrial laundry sites and our focus on servicing the Textile Services industry have given us the depth and breadth of understanding unmatched in the industry. Our offer includes:

- TAGSYS RFID tags are offered in a variety of form factors and support industry standard protocols. With one of the industry's largest tag product portfolios, TAGSYS offers ruggedized RFID tags (ARIO) as well as low cost, ultra-thin and flexible RFID inlays and labels (FOLIO/TRAK) designed to meet a wide range of application requirements.
- A full range of RFID reader systems designed specifically to meet the specific requirements of item level applications. The reader systems include complete "easy-to-use" solutions designed for specific markets and applications, assuring ease of installation and integration for the partner community as well as guaranteed performance and reliability to the end user.
- A worldwide network of Partners dedicated to deploying complete, end-to-end industry-specific solutions — from business process analysis to RFID infrastructure design to application software, product labeling and complete system integration on a local basis.

Powered by
TAGSYS™ RFID

Assuring end-to-end, item-level tracking accuracy takes more than just components. It demands complete RFID systems that work together seamlessly. TAGSYS and its certified partners fulfill that need, delivering the industry's most comprehensive, integrated, item-level RFID infrastructure with guaranteed performance.

SPECIMEN TRACKING

Specimen collection, routing and analysis are critical functions within the healthcare facility. The TAGSYS RFID Solution assures accurate specimen to patient relationship, eliminates costly mistakes due to manual data entry and expedites specimen collection and analysis. Real-time visibility into the location of the specimen allows medical and laboratory staff to decrease error rates and increase staff productivity.

PHARMACEUTICAL DISTRIBUTION

Guaranteeing the RIGHT medication for the RIGHT Patient is an essential factor in patient safety. The TAGSYS RFID Solution provides an automated way of validating and administering medication as well as providing the ability to automatically control and validate dosage. In addition to the direct patient benefits, RFID brings the ability to do inventory management of medication from the pharmacy to the facility floor.

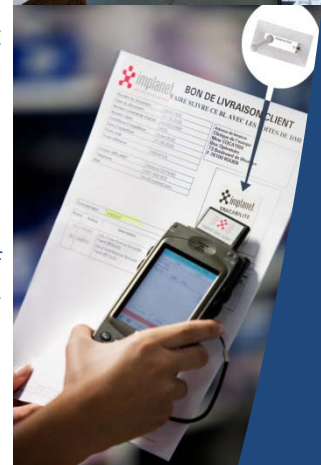

ASSET AND SUPPLIES TRACKING

Automated distribution, collection and tracking of high value and fast turn assets and supplies enable healthcare organizations to decrease costs and increase operational efficiency. Real-time, accurate inventory allows organizations to eliminate shortages and/or overages of stock and to instate automated distribution collection and distribution processes to assure secure and hygienic handling of the assets and supplies. Loss prevention applications can be easily integrated to reduce the shrinkage of costly items.

HEALTH RECORD TRACKING

The increased complexity in healthcare document management has led to significant reductions in productivity as it takes more and more time to locate misled or misplaced health records. A consequence of this trend is the long wait period customers have to face to obtain their documents, resulting in a facility's degrading image and quality of service. The TAGSYS RFID Solution for Document Tracking enables research, locate, and find documents in a few minutes as well as accelerating document checkout and check-in.

WITH TAGSYS RFID SYSTEMS:

- CONTROL HIGH VALUE ITEMS:
 - MEDICAL SCRUBS
 - LINEN
 - ORTHOPEDIC EQUIPMENT
 - SURGICAL EQUIPMENT
- ASSURE THE RIGHT MEDICATION FOR THE RIGHT PATIENT
- GAIN REAL-TIME AUTOMATED VISIBILITY INTO THE SPECIMEN COLLECTION AND ANALYSIS

RFID TECHNOLOGY PRIMER

Our renowned expertise in RFID research and development, our constructive experience in implementing RFID tracking systems at industrial, multiple distribution sites and retail environments, and our focus on servicing the Healthcare and Pharma markets have given us the depth and breadth unmatched in the industry.
